EXPORTS...

. . . their importance to the United States economy

Exports play an important role in our economy and in the increasingly interdependent world economy. The United States is the world's largest exporter— currently selling $200 billion of U.S. goods abroad— and is the world's largest economy. With 5 percent of the world's population, our country produces 24 percent of the world's industrial goods.

Exporting provides a broader marketing base for U.S. firms and is considerably more important than many Americans realize. Exports currently account for 5 million jobs in the United States. On average, 25,000 jobs are generated per $1 billion of U.S. merchandise exports.

Many jobs depend on exports

Employment generated by exports is much greater than the number actually employed in producing the final products shipped abroad. Exports create a large demand for employment that spreads throughout our economy. This includes all the jobs needed to produce goods and services supplied to export producers, the jobs needed by the export producers to produce exports, and the jobs needed to move products to our ports or borders for transport to other countries.

Most of the export-related jobs are in manufacturing and services. According to the latest estimates, 49 percent of the jobs are in manufacturing, 37 percent in services, and 14 percent in production of nonmanufactured goods. The importance of export employment varies among the industries. About one out of every eight Americans currently employed in manufacturing is dependent on exports of manufactured goods. About one out of every six jobs producing nonmanufactured goods and one out of 24 jobs in services are export-related.

Exports affect production and employment in all industries, not just in a few major export industries. For example, while the primary metals industries directly export about $6 billion of their products annually, an additional $21 billion of steel and other metals are exported in the form of American-made computers, aircraft, tractors, and other manufactured goods.

Exports are of great importance to America's farmers as well. They account for $1 of every $4 of farm sales. Likewise, many jobs in the coal mining and mineral industries, as well as a considerable number in the fishing industry, are dependent on overseas sales. Exports also support employment in the trucking, rail transport, insurance, and other service industries.

Exports essential

But the basic importance of exports is that they are the principal means by which America pays for its purchases from foreign countries. The United States imports proportionately far less than other major countries, but imports have become increasingly important to the American standard of living— and they have to be paid for. The other major industrial nations generally cover the cost of the goods they import by their exports. Merchandise exports and imports each account for an average of about 20 percent of the gross national product in that group of countries. American exports, however, were only 5.9 percent of GNP in 1983, while the ratio of imports to GNP stood at 7.8 percent. This gap between exports and imports is the trade deficit, which amounted to $57.6 billion in 1983.

The strength of our exports means a great deal to America. Exports are important to all the 50 states, and each state plays a significant role in meeting the need to export more. This report helps explain that role and shows the significance of exports in relation to employment and production.

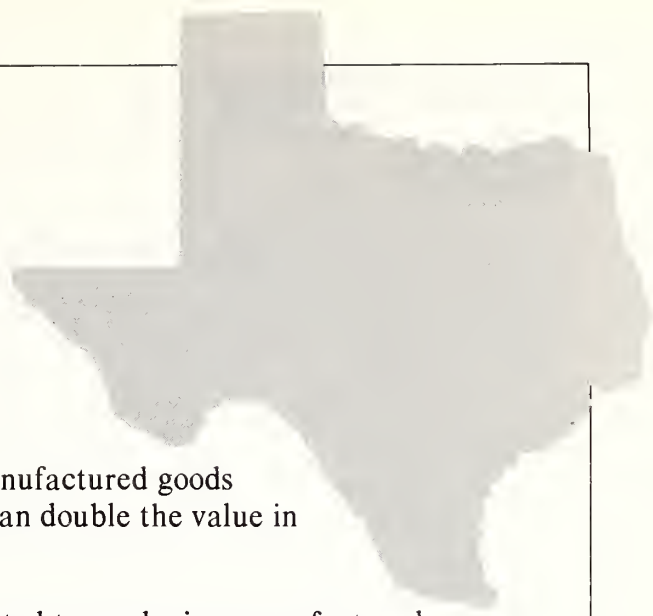
Texas Export Highlights



Texas was the nation's second largest exporter of manufactured goods in 1981. These exports totaled $11.7 billion, more than double the value in 1977. They rose faster than production.

An estimated 77,200 jobs in Texas were directly related to producing manufactured exports in 1981. About 58,500 additional jobs were required to produce materials and parts for incorporation in products exported from the 50 states. Thus, 135,700 jobs in Texas were dependent on exports of manufactured goods—about one of every eight manufacturing jobs in the state.

State second in manufactured exports

Texas' share of U.S. agricultural exports totaled $2.6 billion in FY 1982, almost four times the FY 1977 value. The state was the leading exporter of cotton. Of Texas' farm sales, $1 in every $4 came from exports.

Texas exports of manufactures totaled $11.7 billion in 1981, over 7.1 percent of the U.S. total. The state ranked second nationally as an exporter of these goods. Exports increased 117 percent from 1977 to 1981, compared with the state's 94 percent increase in manufacturing production.

Texas exported a wide variety of manufactures. Two-thirds of the state's foreign shipments in 1981 were concentrated in nonelectric machinery, chemicals, and food manufactures. Petroleum products and electric equipment were the next largest exports, valued at more than $900 million each. Sales of transportation equipment and fabricated metal products each exceeded $500 million.

Many of these industries experienced dramatic export growth after 1977, which in most cases outstripped production growth. The export growth rate of nonelectric machinery exceeded the growth rate production two and a half times. Rising by 116 percent, overseas sales of chemicals far outstripped the 68 percent expansion in chemical production in the same period.

Texas ranked first among the 50 states as an exporter of chemicals; second in petroleum/coal products, and food manufactures; third in nonelectric machinery; and fourth in electric/electronic equipment and fabricated metal products.

Texas' largest manufactured export in 1981 was nonelectric machinery which was valued at $3.3 billion. These exports accounted for 19.4 percent of production in the state and provided employment for 29,100 workers. Export growth accounted for 20 percent of production expansion.

Overseas shipments of chemicals were valued at $3.3 billion in 1981. Over one-tenth of the industry's output was exported in that year, compared to 8.7 percent in 1977. Exports contributed to 15 percent of production growth. Exports in 1981 provided jobs for 8,000 Texas workers, more than 11 percent of the work force.

Manufactured food exports were valued at $1.2 billion in 1981. As a percent of the state's production, manufactured food exports rose from 5.9 percent in 1977 to almost 7.3 percent in 1981. The industry provided 3,700 jobs directly related to exports in 1981, about 4 percent of the work force.

The state's economy benefits from goods produced not only for direct shipment to foreign destinations but also from those for ultimate export through other states. Tables 6 to 8 show Texas' export figures for manufactures including the output of the supplying establishments that furnish parts and materials to the manufactures producing goods in final form for export. Such indirect exports are particularly important in industries whose products require further processing such as chemicals, petroleum/coal products, and primary metals and also in those industries whose products constitute components and parts for assembly into machinery and electric equipment.

The Census Bureau has estimated that the full impact of U.S. exports on Texas' manufacturing activity was 12.5 percent rather than the 6.5 percent attributable to direct exports as shown in table 3. Thus, of the expanded manufacturing output generated between 1977 and 1981, 15 percent—or $1 out of every $7—was due to export-related shipments.

Explanatory Notes

State export statistics presented in this report are estimates, in contrast to national export statistics, which are compiled from export documents prepared at the time goods leave the country. This note considers the reasons for, and consequences of, that difference.

Export estimates for each state are needed in order to measure the relative impact throughout our nation of changes in goods sold abroad. National export data are compiled each month in detail by types of goods sold and summarized in large commodity aggregates and overall totals—but in order to measure exports by each state of origin, which is not identified in shippers' export documents, special studies are necessary.

This report—one in a series of reports for each state—brings together state export estimates from studies by various U.S. Government agencies on manufactured goods, agricultural products, fishery products, and selected minerals. Overall totals for all goods exported from each state are not shown since these studies differ in methodology, frequency, export valuation, and U.S. geographic coverage, and the manufactures and agricultural studies somewhat overlap the products covered.

Manufactured Exports in this report relate to manufactures as defined in the Standard Industrial Classification (SIC) and include manufactured food, mineral fuel products, fats, oils, firearms, and ammunition not typically part of the Standard International Trade Classification (SITC) definition of manufactures. For the United States as a whole, exports of these additional products totaled $28.5 billion in 1981. Exports, normally valued at the port of exportation, are adjusted to f.o.b. plant values to make accurate comparisons with production (shipments) data.

The state estimates for manufactured goods are based on surveys of manufacturers conducted by the Industry Division of the Bureau of the Census. These studies are for selected years; cover the continental United States, Alaska, and Hawaii; and present data classified by the 20 major SIC industry groups (2-digit). Tables 1 to 3 show the value of state exports and state production, and the number of workers employed in manufacturing plants producing the finished goods for direct shipment to foreign destinations.

State economies also benefit from manufactured goods produced for ultimate export through other states, and from jobs related to manufactured exports which are generated in nonmanufacturing industries. In the table below, percentages show the full impact of export-related manufactures on state employment. Tables 6 to 8 show the percent of production and the value of state export-related manufactures—direct exports plus indirect exports or the value of materials and parts incorporated in products exported from elsewhere in the nation—and the number of state export-related workers employed in manufacturing plants producing these goods. Table 8 also shows the total number of workers related to manufactured exports—in manufacturing plus the number in nonmanufacturing industries supporting manufactured exports by supplying materials or services such as forwarding, warehousing, transport, and other foreign trade-related services.

Agricultural Exports relate to food products other than those from marine sources, unmanufactured tobacco, and other agricultural products simply processed such as fibers, raw hides and skins, fats and oils, wine and beverages other than distilled types.

The state estimates for agricultural exports are from studies prepared by the U.S. Department of Agriculture. Exports reflect shares in national exports according to each state's production and sales data. Export values were obtained by multiplying each state's share of farm production by commodity times the total export value for each of the respective commodities. These annual studies are for fiscal years ending September 30 and for all states except Alaska, and show data classified by 18 commodity groups. Tables 4 and 5 show the value of state exports and the percent of farm sales.

Other Exports—Fishery products, various minerals, and fuel export estimates shown in the Highlights on page 1 for selected states are from studies prepared by the National Oceanic and Atmospheric Administration (NOAA), the U.S. Department of Interior, and the U.S. Department of Energy, respectively. Exports generally reflect shares in national exports according to state production.

Annual Exports and Employment Related to Manufactured Exports

	Manufactured exports	Manufacturing employment		Total employment, including nonmanufacturing employment	
	(million dollars)	(thousands)	Percent of manufacturing employment	(thousands)	Percent of civilian employment
Texas *					
1976	5,201	97.5	11.8	176.5	3.4
1977	5,386	88.9	10.0	164.8	3.0
1980	10,118	133.5	12.7	277.3	4.4
1981	11,687	135.7	12.7	285.5	4.2
United States					
1976	83,098	2,125.4	11.3	3,452.1	4.0
1977	85,796	1,990.2	10.2	3,258.2	3.6
1980	151,216	2,639.3	12.8	4,808.3	4.8
1981	164,283	2,603.8	12.8	4,794.0	4.7

* Texas export-related manufactures were as follows in million dollars: 1976, 8,647; 1977, 9,196; 1980, 19,530; and 1981, 22,651. About 15 percent of the increase in Texas manufacturing production from 1977 to 1981 was generated by growth in export-related manufactures.

TABLE 1

Texas Manufactured Exports, Production, and Employment, 1981

- Texas' leading manufactured exports were nonelectric machinery, chemicals, and food products.
- These three industries accounted for 67 percent of Texas' total exports of manufactures.

Industry group	Production (million dollars)	Estimated exports (million dollars)	Exports as percent of production	Estimated employment related to exports (thousands)	Employment related to exports as percent of total employment
Total[1]	180,328	**11,687**	6.5	77.2	7.2

TABLE 2

Texas Growth in Manufactured Exports

- In 1981, Texas's manufactured exports totaled $11.7 billion more than double the 1977 value.
- Over two-thirds the increase stemmed from growth in nonelectric machinery, chemicals, and food products exports.

Industry group	Export value (million dollars)					Percent increase from 1977 to 1981		Export increase as percent of production increase 1977-81

TABLE 5

United States Agricultural Exports* by State

- Exports accounted for over one fourth of total U.S. farm sales in FY 1982 and for more than 25 percent of sales from 20 of the states.
- Illinois, Iowa, California, and Texas each exported more than $2 billion of farm products.

State	Rank as exporter FY 1982	Export value (million dollars)				Percent increase FY 1977 to FY 1982	Exports as percent of farm sales[1] FY 1982

[1] Total includes estimated production and export-related values and employment numbers which are withheld for certain industry groups to avoid disclosure of companies' data. -- Not applicable.

TABLE 7

Texas Growth in Export-Related Manufactures

- The 146 percent growth in the value of export-related manufactures from 1977 to 1981 was much faster than the rate of expansion in production.
- One-third of the increase in chemicals production and one-fourth of the rise in nonelectric machinery output was generated by growth in export-related manufactures.

Industry group	Export-related manufactures (million dollars)		Percent increase from 1977 to 1981		Export-related increase as percent of production increase 1977-81
	1977	1981	Export related	Production

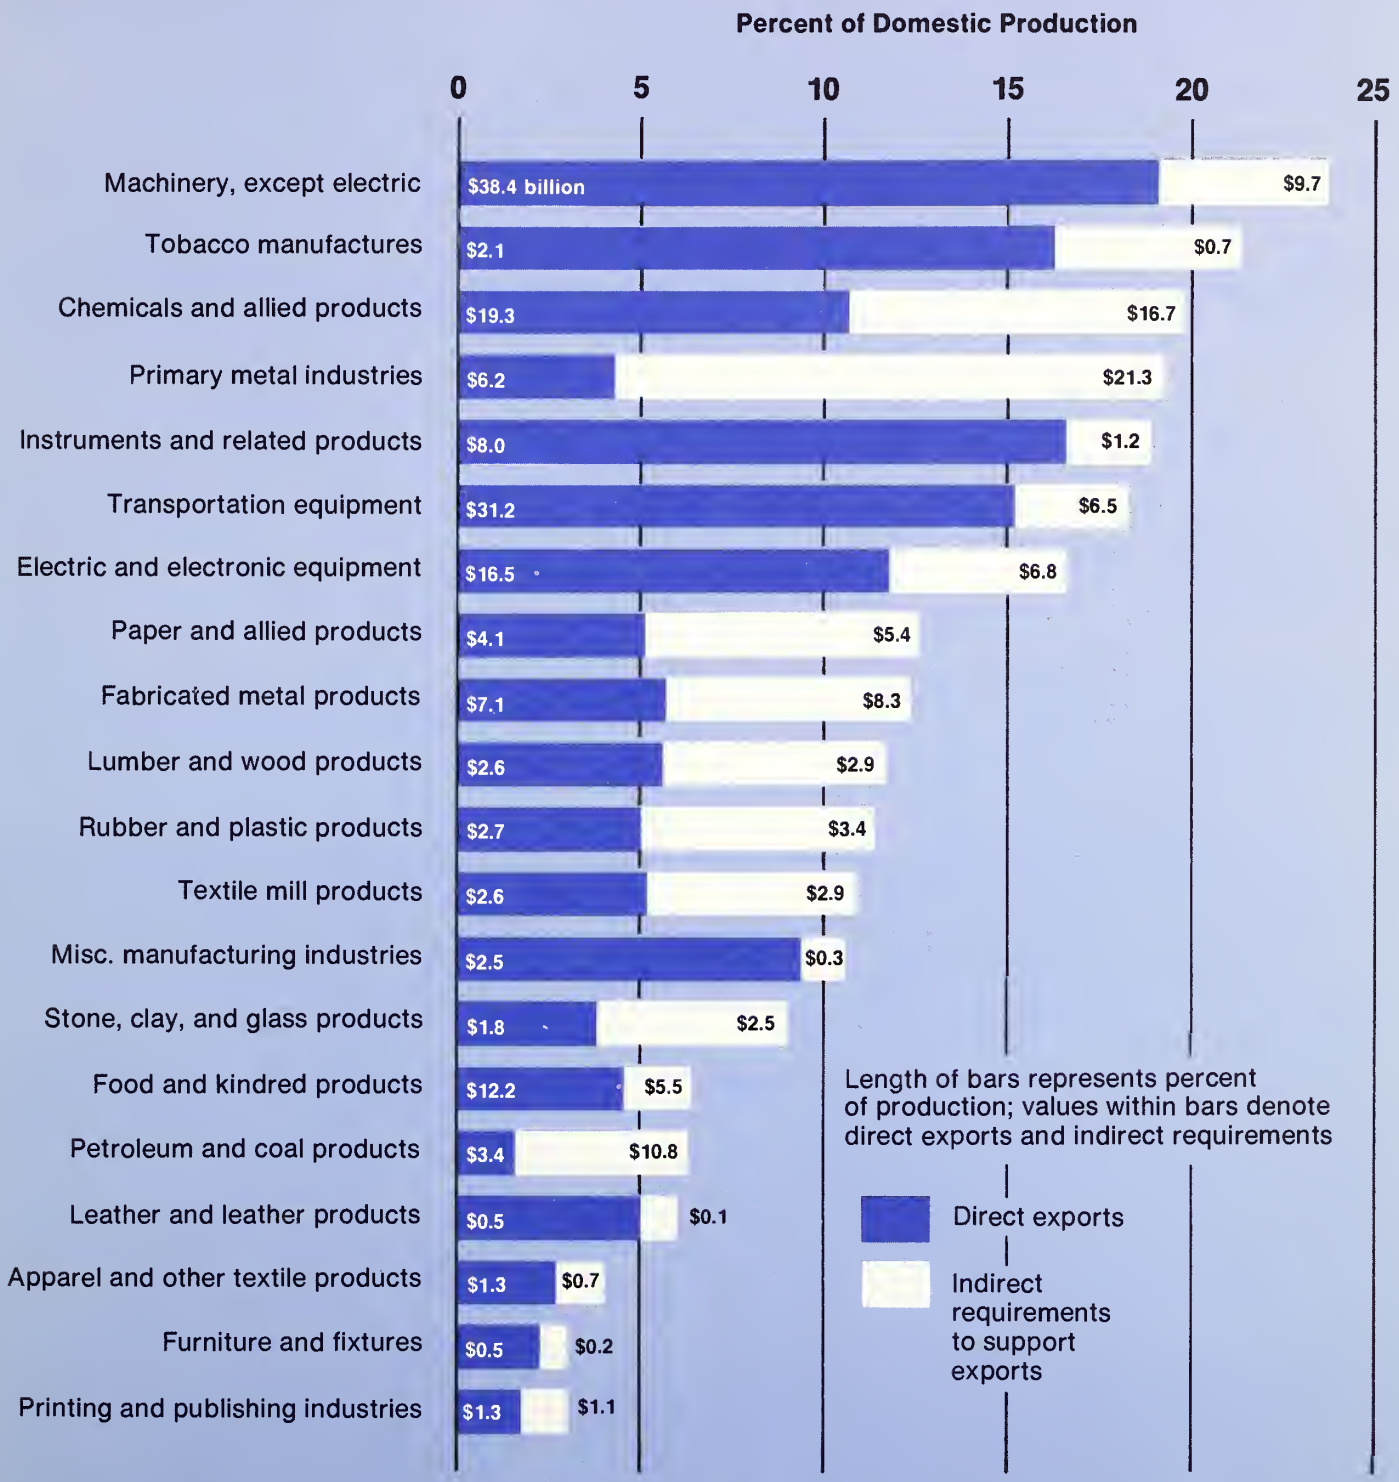
Exports of U.S. Manufacturing Industries Related to Domestic Production, 1981

Direct Exports and Indirect Requirements to Support Exports



Note: Percentages shown for each industry indicate the total relative impact of exports on the domestic economy, including direct exports and goods shipped from domestic establishments for use as inputs in manufactured products exported from other establishments. Such inputs are included in domestic production industry totals.

continued from page 1

Led nation in cotton exports

Texas' share of U.S. agricultural exports in fiscal year 1982, including some manufactures of farm origin, totaled $2.6 billion, a 46 percent increase from the FY 1977 level. Texas was the fourth largest exporter of agricultural products from the United States, accounting for 6.6 percent of the nation's total. Cotton and wheat were the state's largest farm exports, together making up more than half the FY 1982 total. Texas was the leading cotton exporter accounting for over one-third of the national total. Wheat and flour were among the fastest growing of Texas' overseas sales with FY 1982 deliveries almost four times the FY 1977 level.

Texas was also a major exporter of feed grains with FY 1982 overseas shipments of $402 million. The state ranked third nationally as an exporter of rice and ranked second in exports of meat. Other sizable farm exports from Texas included hides, fats, oils and greases, and cottonseed and products.

The sharp growth in exports of agricultural products from FY 1977 to FY 1982 accounted for 23 percent of the rise in farm sales and added substantially to the income of Texas farmers. The export contribution to each dollar of the state's farm sales was 25 cents for FY 1982.

Largest sulfur exporter

Texas was the nation's largest sulfur exporter, with sales totaling an estimated $115 million in 1981 compared to $38 million in 1976. Ferrosilicon exports were worth $255 million, and natural gas, $7 million.

Major exporter of shrimp

Exports of fishery products from Texas totaled $21 million in 1981, virtually unchanged from the amount in 1977. Overseas sales of shrimp, at $19 million ranked second nationally after Louisiana.

Export-related employment sizable

Texas' $11.7 billion worth of manufactured exports provided direct employment for an estimated 77,200 workers in 1981. Those jobs constituted 7.2 percent of the total manufacturing employment in the state. From 1977 to 1981 the number of workers engaged in the production of manufactures rose by only 20 percent, while employment directly related to exports jumped by 49 percent. Almost two-fiths of these workers were concentrated in the nonelectric machinery industry. These jobs accounted for 17 percent of the work force in that industry.

In addition, an estimated 58,500 jobs were required in the state to manufacture products used by other establishments in the United States as inputs for manufactures which were ultimately exported. Thus, an estimated 135,700 jobs in Texas were directly or indirectly dependent on exports of manufactured goods. This was 12.7 percent of all manufacturing employment in the state.

Over half of the jobs dependent on manufactured exports were concentrated in the nonelectric machinery, electric equipment, and chemicals industries. These jobs accounted for one out of four jobs in the chemicals industry and one out of five jobs in the nonelectric machinery and electric equipment industries.

An additional 149,800 jobs were generated in nonmanufacturing industries that supply materials and services supporting manufactured exports. Texas' total employment related to manufactured exports amounted to 285,500 jobs, the third largest among the states.

Texas' farm employment related to exports in 1982 was estimated at 55,600 or about one out of every four farmers. This estimated assumes that the number of farmers dependent on exports corresponds to the ratio of exports to farm sales in the state. Depending on numerous variables, including the character of the product, mechanization, and degree of intensiveness of farming, it may somewhat understate or overstate the actual number dependent on exports.

STATE EXPORT REPORTS

This report is one of a series of 50 prepared by the Office of Trade and Industry Information /Trade Information and Analysis, International Trade Administration on exports from the individual states. Data on manufactured and agricultural exports are presented in tabular form for a series of years. In addition, recent information is included on state exports of fish, fish products, and minerals. The statistics on 1981 exports of manufactures by state were taken from *Origin of Exports of Manufactured Products, 1981 Annual Survey of Manufactures,* M81 (AS)-5, issued by the Bureau of the Census in May 1983. That publication can be ordered from the Data User Services Division, Customer Services (Publications), Bureau of the Census, Washington, D.C. 20233, or from any U.S. Department of Commerce District Office for $2.75 per copy. Data for earlier years were taken from similar Census reports now out of print.

The information on state shares of agricultural exports was taken from various issues of *Foreign Agricultural Trade of the United States* published by the U.S. Department of Agriculture. Special compilations on exports of minerals and fuels by state were provided by the Bureau of the Mines, U.S. Department of Interior, and by the Energy Information Administration, U.S. Department of Energy, and on fish and fishery products by National Oceanic and Atmospheric Administration, U.S. Department of Commerce.
